(54) Title: METHOD OF MAKING A TEXTILE MATERIAL, AND TEXTILE MATERIAL MADE THEREBY

(57) Abstract: A textile material is provided, the appearance of which can be changed by stretching a whole or a part of the material in one or more pre-determined directions. The textile material is formed using a base fabric onto which one or more coating layers (e.g. metallic coating) are applied. The coated fabric is then stretched in a substantially transverse direction to the fabric and then in a substantially longitudinal direction to the fabric.
